REASONS FOR ALLOWANCE

1. The following is an examiner's statement of reasons for allowance: Applicant claims a method for the production of a semi-finished product of composite material comprising a coating step in which high tensile strength fibers are coated with titanium or a titanium based alloy to form a coating on the fibers in a reactive atmosphere containing a reactive gas, a thermomechanical treatment step performed on the coated fibers after the coating step, and a consolidating step in which the coated fibers are then consolidated under pressure at a high temperature to form the semi-finished product, characterized in that during the coating step atoms of the reactive gas are introduced into the titanium or titanium based alloy, and then during the thermomechanical treatment step after the coating step the introduced atoms of the reactive gas react with the titanium or the titanium based alloy to form ceramic particles embedded in the coating of the fibers, and then during the consolidating step the coated fibers are arranged in a desired geometry and consolidated to form the semifinished product.
2. Applicant also claims a method for making a product of a composite material, comprising the steps:
 - a) providing fibers;
 - b) coating the fibers with a coat of a titanium based material containing titanium to produce coated fibers, by carrying out a matrix material deposition process in an atmosphere containing a reactive gas, such that the first atoms of the reactive gas are introduced from atmosphere into the coat of the titanium-based material during deposition process;
 - c) performing a thermomechanical treatment of the coated fibers, and during thermomechanical treatment reacting first atoms of the reactive gas in the coat with second atoms of the titanium-

based matrix material in the coat to form ceramic particles comprising the first and second atoms embedded in the coat;

d) arranging and then consolidated coated fibers in a specified geometry to form a product of composite material comprising fibers and ceramic particles in a matrix comprising a titanium-based matrix material.

The closest prior art, Labib et al., U.S. Patent Number 5,426,000, teaches composites comprising silicon carbide fibers coated by reactive sputtering of a titanium target in a reactive atmosphere. Labib fails to teach or suggest a thermomechanical treatment step after the coating step.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
